Introduction

1.1 Copyright Notice

All Rights Reserved.

The information in this document is subject to change without prior notice in order to improve the reliability, design and function. It does not represent a commitment on the part of the manufacturer.

Under no circumstances will the manufacturer be liable for any direct, indirect, special, incidental, or consequential damages arising from the use or inability to use the product or documentation, even if advised of the possibility of such damages.

This document contains proprietary information protected by copyright. All rights are reserved. No part of this manual may be reproduced by any mechanical, electronic, or other means in any form without prior written permission of the manufacturer.

1.2 About User's Manual

This User's Manual is intended for experienced users and integrators with hardware knowledge of personal computers. If you are not sure about any description in this User's Manual, please consult your vendor before further handling.

1.3 Warning

Single Board Computers and their components contain very delicate Integrated Circuits (IC). To protect the Single Board Computer and its components against damage from static electricity, you should always follow the following precautions when handling it:

- 1. Disconnect your Single Board Computer from the power source when you want to work on the inside.
- 2. Hold the board by the edges and try not to touch the IC chips, leads or circuitry.
- 3. Use a grounded wrist strap when handling computer components.
- 4. Place components on a grounded antistatic pad or on the bag that came with the Single Board Computer, whenever components are separated from the system.

1.4 Replacing the lithium battery

Incorrect replacement of the lithium battery may lead to a risk of explosion. The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer.

Do not throw lithium batteries into the trash-can. It must be disposed of in accordance with local regulations concerning special waste.

1.5 Technical Support

If you have any technical difficulties, please do not hesitate to call or e-mail our customer service.

http://www.arbor.com.tw E-mail:info@arbor.com.tw

1.6 Warranty

This product is warranted to be in good working order for a period of two years from the date of purchase. Should this product fail to be in good working order at any time during this period, we will, at our option, replace or repair it at no additional charge except as set forth in the following terms. This warranty does not apply to products damaged by misuse, modifications, accident or disaster.

Vendor assumes no liability for any damages, lost profits, lost savings or any other incidental or consequential damage resulting from the use, misuse of, or inability to use this product. Vendor will not be liable for any claim made by any other related party.

Vendors disclaim all other warranties, either expressed or implied, including but not limited to implied warranties of merchantibility and fitness for a particular purpose, with respect to the hardware, the accompanying product's manual(s) and written materials, and any accompanying hardware. This limited warranty gives you specific legal rights.

Return authorization must be obtained from the vendor before returned merchandise will be accepted. Authorization can be obtained by calling or faxing the vendor and requesting a Return Merchandise Authorization (RMA) number. Returned goods should always be accompanied by a clear problem description.

1.7 Packing List

1 x EmModule-621E PC/104 CPU module

1 x Driver CD

1 x Quick Installation Guide

If any of the above items is damaged or missing, contact your vendor immediately.

1.8 Ordering Information

EmModule-621E	AMD Geode™ LX800 PC/104 CPU Module	
CBK-09-5362-00	Cable Kit 1 x USB Cable 2 x COM Port Cables 1 x FDD Flat Cable 1 x IDE Cable 1 x Parallel Port Cable 1 x Ethernet Cable 1 x VGA Cable 1 x Keyboard/ Mouse Cable	

1.9 Specifications

Form Factor	PC/104 CPU module
Processor	AMD Geode™ LX800
Cache	64K L1 cache and 128K L2 cache
Chipset	AMD LX800 + CS5536
System Memory	1 x 200-pin DDR SO-DIMM Socket up to 1GB SDRAM
VGA/ LCD Controller	AMD Geode LX series CPU integrated VGA controller with 2D Engine (Shared memory Max. 64MB)
Ethernet	Realtek 8100CL 10/100 base-T Ethernet
LCD	Supports 18/24-bit TTL up to 1280 x 1024
I/O Chips	W83627HG
BIOS	Phoenix-Award PnP Flash BIOS
IDE Interface	1 x Ultra ATA 33, support 2 IDE devices
Serial Port	2 x COM Ports (1 x RS-232 port, 1 x RS-232/ RS-422/ RS-485 selectable
Parallel Port / Floppy	1 x SPP/EPP/ECP mode 1 x Floppy connector
KBMS	Standard PS/2 interface Keyboard and Mouse
Universal Serial Bus	2 x USB 2.0 ports
PCI to ISA bridge	ITE8888G (Master ISA and PnP feature not supported)
Expansion Bus	PC/104 interface
Flash Disk	1 x CompactFlash Type II Socket
RTC	AMD Geode CS5536 built-in RTC with lithium battery
Power Input Connector	Small-4P AT Power Connector
Operation Temp.	-40°C ~ 85°C (-40°F ~ 185°F)
Watchdog Timer	1 ~ 255 levels Reset (Sec. or Min.)
Dimension (L x W)	96 x 90 mm (3.8" x 3.5")
Dimension (L x W)	96 x 90 mm (3.8" x 3.5")

VGA1	Analog RGB Display Connector

Jumpers

JRS1: COM2 RS-232/422/485 Selection (6)

The onboard COM2 port can be configured to operate in RS-422 or RS-485 modes. RS-422 modes differ in the way RX/TX is being handled. Jumper JRS1 switches between RS-232 or RS-422/485 mode. When JRS1 is set to RS-422 or RS-485 mode, there will be only +12V output let while JRS1 is set. All RS-232/422/482 modes are available on COM2.

It can be configured COM2 to operate in RS-232, RS-422 or RS-485 mode Connector type: 2.00mm pitch 2x3-pin headers.

Mode	RS-232 (Default)	RS-422	RS-485
1-2	ON	OFF	OFF
3-4	OFF	ON	OFF
5-6	OFF	OFF	ON
	1 2 0 0 5 0 6	1 2 5 6	1 2 0 6

JBAT1: Clear CMOS Setting (13)

If the board refuses to boot due to inappropriate CMOS settings here is how to proceed to clear (reset) the CMOS to its default values.

Connector type: 2.00 mm pitch 1x3-pin headers

Pin	Mode	
1-2	Keep CMOS (Default)	3 2 1
2-3	Clear CMOS	3 2 1

You may need to clear the CMOS if your system cannot boot up because you forgot your password, the CPU clock setup is incorrect, or the CMOS settings need to be reset to default values after the system BIOS has been updated. Refer to the following solutions to reset your CMOS setting:

Solution A:

- 1. Power off the system and disconnect the power cable.
- 2. Place a shunt to short pin 1 and pin 2 of JBAT1 for five seconds.
- 3. Place the shunt back to pin 2 and pin 3 of JBAT1.
- 4. Power on the system.

Solution B:

If the CPU Clock setup is incorrect, you may not be able to boot up. In this case, follow these instructions:

- 1. Turn the system off, then on again. The CPU will automatically boot up using standard parameters.
- 2. As the system boots, enter BIOS and set up the CPU clock.

Note:

If you are unable to enter BIOS setup, turn the system on and off a few times.

Connctors

KBM1: Keyboard & Mouse Connector (1)

BIOS

3.1 BIOS Introduction

The Award BIOS (Basic Input/Output System) installed in your computer system's. The BIOS provides for a standard device such as disk drives, serial ports and parallel ports. It also adds password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

3.2 BIOS Setup

The Award BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility.

When you turn on the computer, the Award BIOS is immediately activated. Pressing the key immediately allows you to enter the Setup utility. If you a little bit late press the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup.

If you still wish to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again.

The following message will appear on the screen:

Press to Enter Setup

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit. When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

3.3 Standard CMOS Features

Phoenix – AwardBIOS CMOS Setup Utility Standard CMOS Features				
Date (mm:dd:yy) Time (hh:mm:ss)	Mon, Oct 8 2007 15 : 17 : 59	Item Help

↑↓→←:Move Enter:Select +/-/PU/PD:Ualue F10:Save ESC:Exit F1:General Help F5: Previous Values F6: Fail-Safe Defaults F7: Optimized Defaults				

"Standard CMOS Features" allows you to record some basic hardware configurations in your computer system and set the system clock and handling. If the CPU card error is already installed this will select working system, you not need to option. You will need to run the Standard CMOS option, however, if you change your system hardware configurations, such as onboard battery fails, or the configuration stored in the CMOS memory was lost or damaged.

Date

The date format is: Day: Sun to Sat

Month: 1 to 12 Date: 1 to 31

Year: 1999 to 2099

Time

The time format is: **Hour**: 00 to 23

Minute: 00 to 59 **Second**: 00 to 59

To set the date & time, highlight the "Date" & "Time" and use the <PgUp>/ <PgDn> or +/- keys to set the current time.

IDE Primary HDDs / IDE Secondary HDDs

The onboard PCI IDE connectors provide Primary and Secondary channels for connecting up to four IDE hard disks or other IDE devices.

Each channel can support up to two hard disks; the first is the "Master" and the second is the "Slave".

Press <Enter> to configure the hard disk. The selections include Auto, Manual, and None. Select 'Manual' to define the drive information manually. You will be asked to enter the following items.

Cylinder: Number of cylinders

Head: Number of read/write heads Precomp: Write precompensation

Landing Zone: Landing zone
Sector: Number of sectors

The Access Mode selections are as follows:

CHS (HD < 528MB)

LBA (HD > 528MB and supports Logical Block Addressing)

Large (for MS-DOS only)

Auto

Drive A / Drive B

These fields identify the types of floppy disk drive A or drive B that has been installed in the computer. The available specifications are:

None 360K, 5.25 in. 1.2M, 5.25 in. 720K, 3.5 in. 1.44M, 3.5 in. 2.88M, 3.5 in.

Video

This field selects the type of video display card installed in your system. You can choose the following video display cards:

EGA/VGA For EGA, VGA, SEGA, SVGA or PGA monitor adapters. (default)

CGA 40 Power up in 40 column mode.
CGA 80 Power up in 80 column mode.
MONO For Hercules or MDA adapters.

Halt On

This field determines whether or not the system will halt if an error is detected

during power up.

All errors (default) Whenever the BIOS detects a non-fatal error, the

system will stop and you will be prompted.

No errors The system boot will not be halted for any error that

may be detected.

All, But Keyboard The system boot will not be halted for a keyboard

error; it will stop for all other errors.

All, But Diskette The system boot will not be halted for a disk error; it

will stop for all other errors.

All, But Disk/Key

The system boot will not be halted for a keyboard

or disk error; it will stop for all others.

3.4 Advanced BIOS Features

Quick Power On Self Test

When enabled, this field speeds up the Power On Self Test (POST) after the system is turned on.

If it is set to Enabled, BIOS will skip some items.

Setting: Enabled (Default), Disabled.

First/ Second Boot Device

These fields determine the drive that the system searches first for an operating system. The options available include

Setting: Floppy, LS120, HDD-0, SCSI, CDROM, HDD-1, ZIP100, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, LAN and Disabled.

Boot Other Device

It allows the system to search for an OS from other devices other than the ones selected in the First/ Second/ Third Boot Device.

Setting: Enabled (Default), Disabled.

Boot Up NumLock Status

It allows you to activate the NumLock function after you power up the system.

Setting: On (Default), Off.

Security Option

It allows you to limit access to the System and Setup.

When you select System, the system prompts for the User Password every time you boot up.

When you select Setup, the system always boots up and prompts for the Supervisor Password only when the Setup utility is called up.

Setting: Setup (Default), System.

Cyrix 6x86/MII CPUID

Disable CPU ID instruction if you are using Netware v5.0.

Setting: Enabled (Default), Disabled.

3.5 Advanced Chipset Features

CAS Latency Time

It allows CAS latency time in HCLKs as 2 or 2.5. The system board designer should set the values in this field, depending on the DRAM installed. Do not change the values in this field unless you change specifications of the installed DRAM or CPU.

Setting: 2.5 (Default), 2.

Interleave Select

It allows you to Use the Interleave Select option to specify how the cache memory is interleaved.

Setting: LOI (Default), HOI.

XOR BA0

Setting: Disabled (Default), Enabled.

XOR BA1

Setting: Disabled (Default), Enabled.

XOR MB0

Setting: Disabled (Default), Enabled.

XOR Bit Select

Setting: 18 (Default), 19, 20, 21.

Video Memory Size

In order to determine how much memory is allocated to the video graphics device.

Setting: None, 8M (Default), 16M, 32M, 64M, 128M, 254M.

Output display

In order to specify the display devices the system is connected to. Setting: Flat Panel, CRT (Default), Panel & CRT.

Flat Panel Configuration

It allows you to open the Flat Panel Configuration menu.

Memory Hole At 15M-16M

In order to improve performance, certain space in memory can be reserved for ISA cards. This memory must be mapped into the memory space below 16 MB.

Setting: Disabled (Default), Enabled.

3.6 Integrated Peripherals

OnChip IDE Devicev >>>

On-Chip IDE Channel 1

The integrated peripheral controller contains an IDE interface with support for two IDE channels. Select Enabled to activate each channel separately. Setting: Disabled, Enabled (Default).

IDE Primary Master/Slave PIO

It allows your system HDD controller to run faster.

Rather than having the BIOS issue with a series of commands that transferring to or from the disk drive, PIO (Programmed Input/Output) allows the BIOS to communicate with the controller and CPU directly.

When Auto is selected, the BIOS will select the best available mode.

Setting: Auto (Default), Mode 0, Mode 1, Mode 2, Mode 3, Mode 4.

IDE Primary Master/Slave UDMA

It allows your system to improve disk I/O throughput to 33MB/sec with the Ultra DMA33 feature.

Setting: Disabled, Auto.

IDE DMA Transfer Access

Setting: Disabled, Enabled (Default).

IDE HDD Block Mode

It allows your HDD controller to use the fast block mode to transfer data to and from your HDD drive.

Setting: Disabled, Enabled (Default).

SuperIO Device >>>

Onboard FDC Controller

Select "Enabled" if you wish to use it. Select "Disabled" if you don't wish to use it.

Setting: Disabled, Enabled (Default).

Serial/ Onboard Parallel Port

It allows you to select the onboard serial and parallel ports with their addresses.

Setting: Serial Port 1 3F8/IRQ4 (Default)

Serial Port 2 2F8/IRQ3 (Default) Parallel Port 378H/IRQ7 (Default)

UART Mode Select

It determines the UART 2 mode in your computer.

Setting: IrDA, ASKIR, Normal (Default).

RxD, TxD Active

Setting: Hi,Hi, Hi,Lo (Default), Lo,Hi, Lo,Lo.

IR Transmission Delay

Setting: Disabled, Enabled (Default).

UR2 Duplex Mode

Setting: Full, Half (Default).

Use IR Pins

Setting: RxD2,TxD2 , IR-Rx2Tx2 (Default).

Parallel Port Mode

Setting: SPP (Default)

EPP ECP

ECP+EPP Normal

EPP Mode Select

Setting: EPP1.9, EPP1.7 (Default)

ECP Mode Use DMA

Setting: 1, 3 (Default).

IT8888 ISA Decode IO >>>

It allows you to use the IT8888 ISA Decode IO menu to set the IO memory range for the onboard ISA.

Decode I/O Space 0/ 1/ 2/ 3/ 4/ 5

It allows you to allocate system resources to the ISA bridge and to enable the function correctly.

Setting: Disabled, Enabled (Default).

Decode I/O Speed 0/ 1/ 2/ 3/ 4/ 5

It allows you to specify the speed of the ISA bus.
Setting: Subtractive Speed, Slow Speed, Medium Speed,
Fast Speed.

Decode I/O Address 0/ 1/ 2/ 3/ 4/ 5 [15:4]

It allows you to allocate an address to the ISA bus. The address may range from 0001 to 0FFF.

Decode I/O Size 0/ 1/ 2/ 3/ 4/ 5

It allows you to specify the size of the ISA bus.

Setting: 1 Byte, 2 Bytes, 4 Bytes, 8 Bytes, 16 Bytes, 32 Bytes, 64 Bytes, 128 Bytes.

IT8888 ISA Decode Memory >>>

It allows you to use the IT8888 ISA Decode Memory to set the resources for the onboard ISA bus.

Decode Memory Space 0/ 1/ 2/ 3

It allows you to allocate memory resources to the ISA bridge and to enable the function correctly.

Setting: Disabled (Default), Enabled.

Decode Memory Speed 0/ 1/ 2/ 3

It allows you to specify the memory speed of the ISA bus. Setting: Subtractive Speed, Slow Speed, Medium Speed, Fast Speed.

Decode Memory Addr. 0/ 1/ 2/ 3 [23:

It allows you to allocate a memory address to the ISA bus. The address may range from 0001 to 0FFF.

Decode Memory Size 0/ 1/ 2/ 3

It allows you to specify the memory size of the ISA bus. Setting: 16 KB, 32 KB, 64 KB, 128 KB, 256 KB, 512 KB, 1MB, 2MB.

IT8888 DDMA >>>

Suppose that the ISA bus card is required DMA1 & DMA5. Set "DDMA1 Support" & "DDMA5 Support" to "Enabled".

Onboard Lan Boot ROM

Setting: Enabled, Disabled (Default).

3.7 PNP/PCI Configurations

PNP OS Installed

It allows you to enable the PNP OS Install option if it is supported by the OS installed.

Setting: No (Default), Yes.

Reset Configuration Data

It allows you to determine whether to reset the configuration data or not. Setting: Disabled (Default), Enabled.

Resources Controlled By

This PnP BIOS can configure all of the boot and compatible devices with the use of a PnP operating system.

Setting: Auto(ESCD) (Default), Manual.

IRQ Resources

It allows you to configure the IRQ / DMA Resources.

Memory Resources

It allows you to configure the Memory Resources.

PCI/VGA Palette Snoop

Some non-standard VGA display cards may not show colors properly. It allows you to set whether or not MPEG ISA/VESA VGA cards can display with PCI/VGA.

When "Enabled", a PCI/VGA can display with an MPEG ISA/VESA VGA card.

When "Disabled", a PCI/VGA can not display with an MPEG ISA/VESA VGA card.

Setting: Disabled (Default), Enabled.

3.8 PC Health Status

Current CPU Temperature

CPU/ MEM VCore

VCC3/ +5V/ +12V/ VBAT(V)/ 5VSB

3.9 Load Optimized Defaults

It allows you to load the default values to your system configuration. The default setting is optimal and enabled all high performance features.

3.10 Set Password

Using Password to set a password that will be used exclusively on the system. To specify a password, highlight the type you want and press <Enter>.

The Enter Password: message prompts on the screen. Type the password, up to eight characters in length, and press <Enter>. And the system confirms your password by asking you to type it again. After setting a password, the screen automatically returns to the main screen.

To disable a password, just press the <Enter> key when you are prompted to enter the password. A message will confirm the password to be disabled. Once the password is disabled, the system will boot, then you can enter BIOS Setup freely.

3.11 Save & Exit Setup

Typing "Y", you will quit the setup utility and save all the changes into the CMOS memory.

Typing "N", you will return to Setup utility.

3.12 Exit Without Saving

Typing "Y" will quit the Setup utility without saving the modifications. Typing "N" will return you to Setup utility.

3.13 BIOS memory mapping

Address	Device Description
E000:0000h - F000:FFFFh	System BIOS Area
D000:2000h - D000:FFFFh	Free space
D000:0000h - D000:1FFFh	LAN ROM
C000:E000h - CF00:FFFFh	Free space
C000:0000h - C000:DFFFh	VGA BIOS
A000:0000h - B000:FFFFh	VGA RAM
0000:0000h - 9000:FFFFh	DOS 640K

3.14 Award BIOS POST Codes

CFh	Test CMOS read/write functionality
	Early chipset initialization: Disable shadow RAM, L2 cache (socket 7)
C0h	and below), program basic chipset registers
C1h	and below), program basic chipset registers Detect memory: Auto detection of DRAM size, type and ECC, auto
	detection of L2 cache (socket 7 and below)
C3h	Expand compressed BIOS code to DRAM
C5h	Call chipset hook to copy BIOS back to E000 & F000 shadow RAM
01h	Expand the Xgroup codes located in physical memory address 1000:0
02h	Reserved
03h	Initial Superio_Early_Init switch
04h	Reserved
05h	Blank out screen; Clear CMOS error flag
06h	Reserved
07h	Clear 8042 interface; Initialize 8042 self test
08h	Test special keyboard controller for Winbond 977 series Super I/O
09h	chips; Enable keyboard interface Reserved
UBIT	Disable PS/2 mouse interface (optional); Auto detect ports for
0Ah	keyboard & mouse followed by a port & interface swap (optional);
UAII	Reset keyboard for Winbond 977 series Super I/O chips
0Bh	Reserved
0Ch	Reserved
0Dh	Reserved
	Test F000h segment shadow to see whether it is read/write capable or
0Eh	not. If test fails, keep beeping the speaker
0Fh	Reserved
10h	Auto detect flash type to load appropriate flash read/write codes into
	the run time area in F000 for ESCD & DMI support
11h	Reserved
12h	Use walking 1's algorithm to check out interface in CMOS circuitry.
13h	Also set real time clock power status and then check for override
	Reserved Program chipset default values into chipset. Chipset default values
14h	are MODBINable by OEM customers
15h	Reserved
16h	Initial Early Init Onboard Generator switch
17h	Reserved
	Detect CPU information including brand, SMI type (Cyrix or Intel) and
18h	CPU level (586 or 686)
19h	Reserved
1Ah	Reserved
1Bh	Initial interrupts vector table. If no special specified, all H/W
	interrupts are directed to SPURIOUS_INT_HDLR & S/W interrupts to
	SPURIOUS_soft_HDLR
1Ch	Reserved
1Dh	Initial EARLY_PM_INIT switch
1Eh	Reserved
1Fh	Load keyboard matrix (notebook platform)

20h	Reserved
21h	HPM initialization (notebook platform)
22h	Reserved
23h	Check validity of RTC value; Load CMOS settings into BIOS stack. If CMOS checksum fails, use default value instead; Prepare BIOS resource map for PCI & PnP use. If ESCD is valid, take into consideration of the ESCD's legacy information; Onboard clock generator initialization. Disable respective clock resource to empty PCI & DIMM slots; Early PCI initialization - Enumerate PCI bus number, assign memory & I/O resource, search for a valid VGA device & VGA BIOS, and put it into C000:0
24h	Reserved
25h	Reserved
	Reserved
26h 27h	Initialize INT 09 buffer
28h	Reserved
29h	Program CPU internal MTRR (P6 & PII) for 0-640K memory address; Initialize the APIC for Pentium class CPU; Program early chipset according to CMOS setup; Measure CPU speed; Invoke video BIOS
2Ah	Reserved
2Bh	Reserved
2Ch	Reserved
2Dh	Initialize multilanguage; Put information on screen display, including Award title, CPU type, CPU speed, etc
2Eh	Reserved
2Fh	Reserved
30h	Reserved
31h	Reserved
32h	Reserved
33h	Reset keyboard except Winbond 977 series Super I/O chips
34h	Reserved
35h	Reserved
36h	Reserved
37h	Reserved
38h	Reserved
39h	Reserved
3Ah	Reserved
3Bh	Reserved
3Ch	Test 8254
3Dh	Reserved
3Eh	Test 8259 interrupt mask bits for channel 1
3Fh	Reserved
40h	Test 9259 interrupt mask bits for channel 2
41h	Reserved
42h	Reserved
43h	Test 8259 functionality
44h	Reserved
45h	Reserved
46h	Reserved

47h	Initialize EISA slot
48h	Reserved
49h	Calculate total memory by testing the last double last word of each
	64K page; Program writes allocation for AMD K5 CPU
4Ah	Reserved
4Bh	Reserved
4Ch	Reserved
4Dh	Reserved
	Program MTRR of M1 CPU; initialize L2 cache for P6 class CPU &
4Eh	program cacheable range; Initialize the APIC for P6 class CPU; On
, L.	MP platform, adjust the cacheable range to smaller one in case the
	cacheable ranges between each CPU are not identical
4Fh	Reserved
50h	Initialize USB
51h	Reserved
52h	Test all memory (clear all extended memory to 0)
53h	Reserved
<u>54h</u>	Reserved
55h	Display number of processors (multi-processor platform)
56h	Reserved
57h	Display PnP logo; Early ISA PnP initialization and assign CSN to
58h	every ISA PnP device
59h	Reserved Initialize the combined Trend Anti-Virus code
5Ah	
	Reserved Show message for entering AWDFLASH.EXE from FDD (optional
5Bh	feature)
5Ch	Reserved
	Initialize Init Onboard Super IO switch; Initialize Init Onboard
5Dh	AUDIO switch
5Eh	Reserved
5Fh	Reserved
60h	Okay to enter Setup utility
61h	Reserved
62h	Reserved
63h	Reserved
64h	Reserved
65h	Initialize PS/2 mouse
66h	Reserved
67h	Prepare memory size information for function call: INT 15h ax=E820h
68h	Reserved
69h	Turn on L2 cache
6Ah	Reserved
6Bh	Program chipset registers according to items described in Setup &
	Auto-Configuration table
6Ch	Reserved
6Dh	Assign resources to all ISA PnP devices; Auto assign ports to onboard
	COM ports if the corresponding item in Setup is set to "AUTO"
6Eh	Reserved
6Fh	Initialize floppy controller; Setup floppy related fields in 40:hardware

Chapter 4 Appendix

4.1 I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device.

The following table lists the I/O port addresses used.

Address	Device Description
00000022 - 0000003F	PCI bus
00000044 - 00000047	PCI bus
0000004C - 0000006F	PCI bus
00000060 - 00000060	PC/AT Enhanced PS/2 Keyboard
00000064 - 00000064	PC/AT Enhanced PS/2 Keyboard
00000072 - 0000007F	PCI bus
00000090 - 00000091	PCI bus
00000093 - 0000009F	PCI bus
000000A2 - 000000BF	PCI bus
000000E0 - 000000EF	PCI bus
00000100 - 00000CF7	PCI bus
00000170 - 00000177	Secondary IDE Channel
000001F0 - 000001F7	Primary IDE Channel
00000274 - 00000277	ISAPNP Read Data Port
00000279 - 00000279	ISAPNP Read Data Port
000002F8 -000002FF	Communications Port
00000376 - 00000376	Secondary IDE Channel
00000378 - 0000037F	Printer Port
000003B0 - 000003BA	Advanced Micro Devices Win 2K/XP Graphics Driver
000003C0 - 000003DF	Advanced Micro Devices Win 2K/XP Graphics Driver
000003F0 - 000003F5	Standard Floppy Disk Controller
000003F6 - 000003F6	Primary IDE Channel
000003F7 - 000003F7	Standard Floppy Disk Controller

000003F8 - 000003FF	Communications Port
00000778 - 0000077B	Printer Port
00000A79 - 00000A79	ISAPNP Read Data Port
00000D00 - 0000FFFF	PCI Bus
0000FC00 - 0000FCFF	Realtek RTL8139/810x family Fast Ethernet NIC
0000FF00 - 0000FF0F	Standard Dual Channel PCI IDE Controller

4.2 Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ 01	PC/AT Enhanced PS/2 Keyboard
IRQ 03	Communications Port
IRQ 04	Communications Port
IRQ 05	Standard Enhanced PCI to USB Host Controller
IRQ 05	Standard Open HCD USB Host Controller
IRQ 06	Standard Floppy Disk Controller
IRQ 10	Advanced Micro Devices Win 2K/Win Graphics Driver
IRQ 10	Geode LX AES Crypto Driver
IRQ 11	Realtek RTL8139/810x Family Fast Ethernet NIC
IRQ 12	Microsoft PS/2 Mouse
IRQ 14	Primary IDE Channel

4.3 DMA Map

DMA Channel	Device Description
02	Standard Floppy Disk Controller

4.4 Memory Address Map

Address	Device Description
EE000000 - EEFFFFF	Standard Floppy Disk Controller
EFFE8000 - EFFEBFFF	AMD Win 2K/XP Graphics Driver
EFFEC000 - EFFEFFFF	AMD Win 2K/XP Graphics Driver
EFFF0000 - EFFF3FFF	AMD Win 2K/XP Graphics Driver
EFFF4000 - EFFF7FFF	Geode LX AES Crypto Driver
EFFF8000 - EFFFBFFF	AMD Win 2K/XP Graphics Driver
EFFFD000 - EFFFDFFF	Standard Enhanced PCI to USB Host Controller
EFFFE000 - EFFFEFFF	Standard OpenHCD USB Host Controller
EFFFF000 - EFFFF0FF	Realtek RTL8139/810x Family Fast Ethernet NIC
EFFFF000 - 0009EFFF	PCI Bus
000A0000 - 000BFFFF	PCI Bus
000A0000 - 000BFFFF	AMD Win 2K/XP Graphics Driver
000C8000 - 000EEFFF	PCI Bus
0F7C0000 - FFFEFFF	PCI Bus

4.5 Watchdog Timer (WDT) Setting

WDT is widely used for industry application to monitoring the activity of CPU. Application software depends on its requirement to trigger WDT with adequate timer setting. Before WDT time out, the functional normal system will reload the WDT. The WDT never time out for a normal system. Then, WDT will time out and reset the system automatically to avoid abnormal operation.

This board supports 255 levels watchdog timer by software programming. Below are the source codes written in assembly & C, please take them for WDT application examples.

Assembly Code

```
:-- Initial W83627hf --
mov
        AX, 2Eh
