Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- FWS-2300
- CD-ROM for manual (in PDF format) and drivers
- D-sub 9-pin Cable x 1
- HDD Power Cable x 1
- SATA Cable x 1
- Screw Accessories
- 96W Power Adapter

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

<u>Note:</u>

VGA and PS2 Keyboard/Mouse Cables are optional accessories.

Please purchase those cables according to the following item

numbers.

General Information

1.1 Introduction

FWS-2300 adopts the Intel® Pentium® M/Celeron® M Processor, up to 1.8GHz (BGA/socket co-lay). Moreover, the chipset is equipped with Intel® 910GMLE+Intel® 82801FBM (ICH6M). The system memory features two 200-pin DDRII 400 SODIMM sockets total up to 2GB.   It deploys four LAN ports that consist of four PCI 10/100/1000Base-TX Ethernet LAN ports with two ports bypass function.   FWS-2300 condensed appearance features desktop form factor that fits nicely into a space-limited environment.

This compact FWS-2300 is equipped with one ATA-100, two SATA I and CompactFlash™ Type II connector with ATA mode. In addition, it offers flexible expansion with network products and features one Mini-PCI Type III expansion socket, two USB2.0 ports and two RS-232 console ports.   The console port deploys console re-direction that increases the network security via remote control.   All of these designs provide for a more user-friendly solution.

1.2 Features

- Desktop 5 LAN Network Appliance Platform
- Intel® Pentium® M/ Celeron® M Processor Up to 1.8 GHz
- 200-pin Dual-Channel DDRII 400/533 SODIMM x 2 Up to 2 GB
- Intel® 910GMLE Integrated Graphics Accelerator
- PCI 10/100/1000Base-TX Ethernet x 4 (2 Ports Bypass Function)
- Ultra ATA-100 Port x 1, DOM Up To 2 GB Ports, SATA I x 2
- CompactFlash™ Type II x 1
- 96 W Power With Auto Range Input
- USB2.0 x 2, RS-232 Console x 2 (Front Panel x 1, Pin Header x 1)
- Watchdog Function 1~255 Sec.
- 2.5" Internal Disk Drive Bay x 1

Quick Installation Guide

Notice:
The Quick Installation Guide is derived from Chapter 2 of the user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.

OZONE SAFE

RECYCLABLE

2.1 Safety Precautions

The installation is intended for technically qualified personnel who have experience installing and configuring system boards.

The equipment can be installed in a restricted access location (RAL) only.

A restricted access location is a site location for equipment where the following criteria apply:

01. Access can only be gained by service persons or by users who have been trained on the restrictions and the precautions for this specific site.

02. Access is by means of at least one of the following, special tool, lock and key, or other means of security, and is controlled by the authority responsible for the location.

Safety Precautions:

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

FP2	Front Panel Connector 2

2.6 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

Label	Function
ATX2	ATX Power Connector
ATX1	ATX Power_12V Connector
SATA1~2	Serial ATA Connector
IDE1	IDE Connector
USB1	USB Connector
CN2、5	USB PIN HEADER
COM1	RS-232 Serial Port Connector
COM2	RS-232 Serial Port PIN HEADER

CN3	PS2 Keyboard/Mouse Connector
PWR1~2	SATA POWER Connector
CFD1	Compact Flash Slot
MPCI1	Mini PCI Slot
LAN4	LAN Connector
CN1	VGA Connector

2.7 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To "close" a jumper you connect the pins with the clip.

To "open" a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

Open   **Closed**   **Closed 2-3**
A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

Award BIOS Setup

3.1   System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time

2. You have changed the hardware attached to your system

3. The CMOS memory has lost power and the configuration information has been erased.

The FWS-2300 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

3.2   Award BIOS Setup

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press <Del> immediately. This will allow you to enter Setup.

Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

Advanced BIOS Features

Use this menu to set the advanced features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

Power Management Setup

Use this menu to specify your settings for power management. (HDD power down, power on by ring, KB wake up, etc.)

PnP/PCI Configurations

This entry appears if your system supports PnP/PCI.

PC Health Status

This menu allows you to set the shutdown temperature for your system.

Frequency/Voltage Control

Use this menu to specify your settings for auto detect DIMM/PCI clock and spread spectrum.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

Set Supervisor/User Password

Use this menu to set Supervisor/User Passwords.

Save and Exit Setup

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

You can refer to the "AAEON BIOS Item Description.pdf" file in the CD for the meaning of each setting in this chapter.

Driver Installation

The FWS-2300 comes with an AutoRun CD-ROM that contains all drivers and utilities that can help you to install the driver automatically.

Insert the driver CD, the driver CD-title will auto start and show the installation guide. If not, please follow the sequence below to install the drivers.

Follow the sequence below to install the drivers:

      Step 1 – Install INF Driver

      Step 2 – Install VGA Driver

      Step 3 – Install LAN Driver

USB 2.0 Drivers are available for download using Windows$^{®}$ Update for both Windows$^{®}$ XP and Windows$^{®}$ 2000. For additional information regarding USB 2.0 support in Windows$^{®}$ XP and Windows$^{®}$ 2000, please visit www.microsoft.com/hwdev/usb/.

Please read instructions below for further detailed installations.

4.1   Installation:

Insert the FWS-2300 CD-ROM into the CD-ROM drive and install the drivers from Step 1 to Step 3 in order.

Step 1 – Install INF Driver

1.   Click on the *Step 1-INF* folder and double click on the *infinst911autol.exe*

2.   Follow the instructions that the window shows

3.   The system will help you install the driver automatically

Step 2 – Install VGA Driver

1.   Click on the *Step 2 –VGA* folder and double click on *win2k_xp142550.exe*

2.   Follow the instructions that the window shows

3.   The system will help you install the driver automatically

Step 3 – Install LAN Driver

1.   Click on the *Step 3 –LAN* folder and select the OS folder your system is

2.   Double click on *.exe* file located in each OS folder

3.   Follow the instructions that the window shows

4.   The system will help you install the driver automatically

Programming the Watchdog Timer

A.1 Programming

FWS-2300 utilizes ITE 8712 chipset as its watchdog timer controller.
(K version)

Below are the procedures to complete its configuration and the
AAEON intial watchdog timer program is also attached based on
which you can develop customized program to fit your application.

Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8712 enters the
normal mode with all logical devices disabled except KBC.
There are three steps to complete the configuration setup: (1) Enter
the MB PnP Mode; (2) Modify the data of configuration registers; (3)
Exit the MB PnP Mode. Undesired result may occur if the MB PnP
Mode is not exited normally.

(1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write opera-tions to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h, 01h, 55h, 55h:	2Eh	2Fh

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

WatchDog Timer Configuration Registers

LDN	Index	R/W	Reset	Configuration Register or Action
All	02H	W	N/A	Configuration Control
07H	71H	R/W	00H	WatchDog Timer Control Register
07H	72H	R/W	00H	WatchDog Timer Configuration Register
07H	73H	R/W	00H	WatchDog Timer Time-out Value (LSB) Register
07H	74H	R/W	00H	WatchDog Timer Time-out Value (MSB) Register

Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

Bit	Description
7-2	Reserved
1	Returns to the Wait for Key state. This bit is used when the configuration sequence is completed.
0	Resets all logical devices and restores configuration registers to their power-on states.

WatchDog Timer Control Register (Index=71h, Default=00h)

Bit	Description
7	WDT is reset upon a CIR interrupt
6	WDT is reset upon a KBC (Mouse) interrupt
5	WDT is reset upon a KBC (Keyboard) interrupt
4	WDT is reset upon a read or a write to the Game port base address
3-2	Reserved
1	Force Time-out. This bit is self-clearing
0	WDT status
	1: WDT value reaches 0
	0: WDT value is not 0

WatchDog Timer Configuration Register (Index=72h, Default=00h)

Bit	Description
7	WDT Time-out value select
	1: Second
	0: Minute
6	WDT output through KRST (pulse) enable
5	WDT Time-out value Extra select
	1: 4s.
	0: Determine by WDT Time-out value select (bit7 of this register)
4	WDT output through PWROK1/PWROK2 (pulse) enable
3	Select the interrupt level[note] for WDT

WatchDog Timer Time-out Value (LSB) Register (Index=73h,

Default=00h)

Bit	Description
7-0	WDT Time-out value 7-0

WatchDog Timer Time-out Value (MSB) Register (Index=74h,

Default=00h)

Bit	Description
7-0	WDT Time-out value 15-8

C.4 Console Redirection

Console redirection allows you to maintain a system from a remote location by re-directing keyboard input and text output through the serial port. This section will tell you how to use the console redirection.

1. Please insert console cable between on FWS-2300 and remote client system.

2. Setup BIOS in FWS-2300
    BIOS >> advanced BIOS features >> Baud Rate:
            19200(Default)
    BIOS >> advanced BIOS features >> Console Redirection:
            Enable (Default)

Enabled	Attempt to redirect console via COM port
Disabled	Console redirection function disabled

3. Configure Console redirection on client system. This example is
   for Windows platform.
    Step1 - Click the Start button, point to programs >> Accessories
            >> Communication, and click Hyper Terminal
    Step2 - Enter any name for the new connection and select any
            icon
    Step3 - Click OK
    Step4 - From the connect to pull-down menu, select a COM port

available on your client system and click OK

Step5 - Select Baud Rate >> 19200, Flow control >> None, Data
bit >>8, Parity cheek >> None, Stop bit>>1

4. Power on FWS-2300 and it will display the BIOS
information on the client system.
