Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 1 Floppy Cable
- 1 ATA-100 Cable
- 1 Serial Port Cable with one DB-9 connector
- 1 Serial Port Cable with two DB-9 connectors
- 2 USB Cable w/ Bracket
- 4 SATA Cables
- 1 CPU Cooler Fan for LGA 775 Pentium® 4 3.6G
- 1 IMBM-935 Industrial Motherboard
- 1 Quick Installation Guide
- 1 CD-ROM for manual (in PDF format) and drivers

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

**General
Information**

1.1 Introduction

The IMBM-935 is AAEON's Industrial Motherboard which adopts Intel® Core 2 Duo/ Wolfdale Processor up to 2.13GHz, and supports Front Side Bus 800/1066/1333MHz. The high-speed system chipset is one of Intel® leader accounts. The IMBM-935 is designed for Industrial Motherboard with μ ATX form factor.

IMBM-935 supports CRT simultaneous display and adopts a Intel enhanced integrated graphics that makes the IMBM-935 with a great performance on VGA display. Moreover, the shared memory is up to 256M and the resolutions is up to 1280x 1024 x 32bpp at 60MHz for CRT.

IMBM-935 promises you off-the-shelf expansion possibilities with versatile expansion interfaces- PCI and PCI-Express connectors to extend your onboard features.

The IMBM-935 is designed to focus on the Industrial Motherboard market with long-term support services. The IMBM-935 no doubt is your best choice.

1.2 Features

- Intel® Core 2 Duo / Wolfdale LGA775 CPU up to 2.13GHz, FSB 800/1066/1333 MHz
- DDRII 800/667 Memory Support up to 4GB
- Integrated Intel® Enhanced Graphics Core, VGA Support
- 10/100/1000Base-TX Ethernet x 2
- PCI-E [x16] x 1/ PCI-E [x4] x 1/ PCI Slot x 2
- USB 2.0 x 8/ RS-232/422/485 x 1/ RS-232 x 3/ Parallel x 1/ IrDA Port x 1/ SATA-II Port x 5
- Watchdog Function 1~255 Sec.
- Intel® AMT with Circuit Breaker (Optional)

- Watchdog Timer 1~255 steps, can be set with software
on super I/O

- Expansion Interface PCI,PCI-Express
- RTC Internal RTC
- Battery Lithium battery
- Power Requirement ATX 12V
- Operating Temp. 0°C~60°C (32°F~140°F)
- Board Size 9.6"(L) x9.6" (W) (244mm x 244mm)
- Gross Weight 0.71lb (0.32kg)

Display: Supports CRT simultaneous display

- VGA Controller Enhanced Integrated Graphics
- Memory Shared memory up to 256M
- Resolutions Up to 1280 x 1024 x 32bpp @60MHz for CRT

I/O: ITE8712

- Serial Port COM port x 4 (Internal pin header x 3, external D-sub x 1)
COM1,3,4: RS-232
COM2: RS-232/422/485
- Parallel Port Supports SPP/EPP/ECP mode
- USB USB 2.0 port onboard x 8

Quick Installation Guide

Notice:

The Quick Installation Guide is derived from Chapter 2 of the user manual. For other chapters and further installation instructions, please refer to the user manual CD-ROM that came with the product.

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.2 Location of Connectors and Jumpers

JP2	LINE-IN
JP4	Intruder

2.6 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

CPU, Heatsink and Fan Installation

3.1 CPU installation and motherboard handling

Note: When integrating a Pentium 4 processor-based system, be sure to take the proper electrostatic discharge (ESD) precautions.

Caution: Please follow the steps below to ensure proper installation of your processor. Failure to follow these instructions may result in damage to your CPU and/or your motherboard.

Step 1: (Socket Preparation)

Note: Visually inspect to ensure that the socket protective cover is present and securely fastened.

1. Opening the Socket:

Note: Hold corner of the load plate while opening and closing the load lever. This will prevent the bounce back of the load plate which can cause bent contacts.

- a. Disengage the Load Lever by pressing down and out on the hook allowing the lever to clear the Retention Tab and rotate to the fully open position.

- b. Rotate Load Plate to fully open position.
- c. Remove the Protective Cover

Caution: Do not touch the Socket Contacts. This may result in damage to the contacts.

Note: Visually inspect the contact area for bent contacts and foreign material.

Step 2: (Processor Handling)

Note: Handle Processor by substrate edges only.

Caution: Do not touch processor contacts at any time

- a. Remove processor from shipping media by grasping substrate edges only
- b. Visually inspect the processor gold pad array for presence of foreign material. If foreign material is present the pads may be wiped clean with a lint-free cloth and isopropyl alcohol.
- c. Locate the connector 1 indicator and the two orientation notches. (See photo)

Step 3: (Positioning the CPU into socket)

- a. Grasp the processor with your thumb and forefinger on the edges with the orientation notches. The socket has cut-outs for your fingers when handled in this orientation.
- b. Carefully place the CPU into the socket with a purely vertical motion.
- c. Verify that the CPU is in the socket body and properly mated to the orientation keys.

The **Alignment Key** is for you to check if the CPU is aligned with the CPU notch properly.

Yellow Triangle Mark

- d. Close the upper plate (A), place the load lever back to the original position and tightly wedge the lever into the fastening tab. (B)

Step 4: (Heatsink/ Fan Installation).

- a. Place bottom bracket underneath the socket making sure that threaded socket is aligned with the holes in the motherboard.

- b. Viewing the board again from the topside make sure the bracket on the solder side has not shifted from its position. Daub thermal compound on the CPU.

- c. Place the Heatsink on the top of CPU. Please make sure that the four screws are aligned with the holes on the board.

- d. Fasten the four screws. First fasten the two screws (yellow) and then fasten the two screws (red) in sequence to secure the heatsink in place.

- e. Connect the CPU fan cable to the power connector labeled FAN1 on the board.

**Award
BIOS Setup**

4.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

Press <F1> to RESUME

Write down the message and press the F1 key to continue the boot up sequence.

System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

The IBM-935 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

4.2 Award BIOS Setup

Awards BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press immediately. This will allow you to enter Setup.

Standard CMOS Features

Use this menu for basic system configuration. (Date, time, IDE, etc.)

Advanced BIOS Features

Use this menu to set the advanced features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals. (Primary slave, secondary slave, keyboard, mouse etc.)

Power Management Setup

Use this menu to specify your settings for power management. (HDD power down, power on by ring, KB wake up, etc.)

PnP/PCI Configurations

This entry appears if your system supports PnP/PCI.

PC Health Status

This menu allows you to set the shutdown temperature for your system.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance for your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory settings for optimal performance system operations. While AWARD has designated the custom BIOS to maximize performance, the factory has the right to change these defaults to meet their needs.

Set Supervisor/User Password

Use this menu to set Supervisor/User Passwords.

Save and Exit Setup

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

You can refer to the "AAEON BIOS Item Description.pdf" file in the CD for the meaning of each setting in this chapter.

Driver Installation

The IMBM-935 comes with an AutoRun CD-ROM that contains all drivers and utilities that can help you to install the driver automatically.

Insert the driver CD, the driver CD-title will auto start and show the installation guide. If not, please follow the sequence below to install the drivers.

Follow the sequence below to install the drivers:

- Step 1 – Install Intel INF Driver
- Step 2 – Install VGA Driver
- Step 3 – Install LAN Driver
- Step 4 – Install Audio Driver
- Step 5 – Install RAID Driver

USB 2.0 Drivers are available for download using Windows® Update for both Windows® XP and Windows® 2000. For additional information regarding USB 2.0 support in Windows® XP and Windows® 2000, please visit www.microsoft.com/hwdev/usb/

Please read instructions below for further detailed installations.

5.1 Installation

Insert the IBM-935 CD-ROM into the CD-ROM drive. And install the drivers from Step 1 to Step 5 in order.

Step 1 – Install Intel INF Driver

1. Click on the **Step 1-Intel INF** folder and double click on the **Setup.exe**
2. Follow the instructions that the window shows
3. The system will help you install the driver automatically

Step 2 – Install VGA Driver

1. Click on the **Step 2-VGA** folder and choose the OS your system is
2. Double click on the **Setup.exe** located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 3 –Install LAN Driver

1. Click on the **Step 3-Lan** folder and choose the OS your system is
2. Double click on the **.exe** located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 4 – Install Audio Driver

1. Click on the **Step 4-Realtek Audio Driver** folder and choose the OS your system is
2. Double click on the **Setup.exe** located in each OS folder
3. Follow the instructions that the windows shows
4. The system will help you install the driver automatically

Step 5 – Install RAID Driver

1. Click on the **Step 5-RAID** folder and double click on the **Autorun.exe**
2. Follow the instructions that the windows shows
3. The system will help you install the driver automatically

Programming the Watchdog Timer

A.1 Programming

IMBM-935 utilizes W83627EHG chipset as its watchdog timer controller.

Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

Configuring Sequence Description

There are three steps to complete the configuration setup:

- (1) Enter the W83627EHG config Mode
- (2) Modify the data of configuration registers

- (3) Exit the W83627EHG config Mode. Undesired result may occur if the config Mode is not exited normally.

(1) Enter the W83627EHG config Mode

To enter the W83627EHG config Mode, two special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform two write operations to the Special Address port (2EH). The different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h,87h:	2Eh	2Fh

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the config Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the W83627EHG config Mode

The exit key is provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
0aah:	2Eh	2Fh

WatchDog Timer Register I (Index=F5h, Default=00h)

CRF5 (PLED mode register. Default 0 x 00)

Bit 7-6 : select PLED mode

WatchDog Timer Register III (Index=F7h, Default=00h)

- Bit 7** : Mouse interrupt reset Enable or Disable
- = 1 Watchdog Timer is reset upon a Mouse interrupt
 - = 0 Watchdog Timer is not affected by Mouse interrupt
- Bit 6** : Keyboard interrupt reset Enable or Disable
- = 1 Watchdog Timer is reset upon a Keyboard interrupt
 - = 0 Watchdog Timer is not affected by Keyboard interrupt
- Bit 5** : Force Watchdog Timer Time-out. Write Only
- = 1 Force Watchdog Timer time-out event: this bit is self-clearing
- Bit 4** : Watchdog Timer Status. R/W
- = 1 Watchdog Timer time-out occurred
 - = 0 Watchdog Timer counting
- Bit 3-0** : These bits select IRQ resource for Watchdog. Setting of 2 selects SMI.

Mating Connector

C.1 List of Mating Connectors and Cables

The table notes mating connectors and available cables.

Connector Label	Function	Mating Connector		Available Cable	Cable P/N
		Vendor	Model no		
IDE1	IDE Connector	Catch Electronics	1137-020-40 SA	IDE Cable	1701400453
SATA1	SATA Connector	TECHBEST	161S01-025 A	SATA Cable	1709070780
SATA2	SATA Connector	TECHBEST	161S01-025 A	SATA Cable	1709070780
SATA3	SATA Connector	TECHBEST	161S01-025 A	SATA Cable	1709070780
SATA4	SATA Connector	TECHBEST	161S01-025 A	SATA Cable	1709070780
SATA5	SATA Connector	TECHBEST	161S01-025 A	SATA Cable	1709070780
FDD1	Floppy Connector	Catch Electronics	1137-000-34 SA	Floppy Disk Drive Cable	1701340704
LPT1	Parallel Port Connector	FOXCONN	DM11351-H 5W3-4F		N/A
FP1	Front Panel Connector	JIH VEI Electronics	21B22564-X XS10B-01G -6/3-VXX		N/A
FP2	Front Panel Connector	JIH VEI Electronics	21B22564-X XS10B-01G -6/3-VXX		N/A
