Regulatory Compliance

FCC-A Radio Frequency Interference Statement

This equipment has been tested and found to comply with the limits for a class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his personal expense.

Notice 1

The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Notice 2

Shielded interface cables and A.C. power cord, if any, must be used in order to comply with the emission limits.

FOR HOME OR OFFICE USE

Battery Recycling and Disposal

- ☐ Only use the appropriate battery specified for this product.
- ☐ Do not re-use, recharge, or reheat an old battery.
- ☐ Do not attempt to force open the battery.
- ☐ Do not discard used batteries with regular trash.
- ☐ Discard used batteries according to local regulations.

Safety Precautions

- ☐ Always read the safety instructions carefully.
- ☐ Keep this User's Manual for future reference.
- ☐ All cautions and warnings on the equipment should be noted.
- ☐ Keep this equipment away from humidity.
- ☐ Lay this equipment on a reliable flat surface before setting it up.
- ☐ Make sure the voltage of the power source and adjust properly 110/220V before connecting the equipment to the power inlet.
- ☐ Place the power cord in such a way that people cannot step on it.
- ☐ Always unplug the power cord before inserting any add-on card or module.
- ☐ If any of the following situations arises, get the equipment checked by authorized service personnel:
 - The power cord or plug is damaged.
 - Liquid has penetrated into the equipment.
 - The equipment has been exposed to moisture.
 - The equipment has not worked well or you cannot get it work according to User's Manual.
 - The equipment has dropped and damaged.
 - The equipment has obvious sign of breakage.
- ☐ Do not leave this equipment in an environment unconditioned or in a storage temperature above 60°C (140°F). The equipment may be damaged.
- ☐ Do not leave this equipment in direct sunlight.
- ☐ Never pour any liquid into the opening. Liquid can cause damage or electrical shock.
- ☐ Do not place anything over the power cord.
- ☐ Do not cover the ventilation holes. The openings on the enclosure protect the equipment from overheating

1. Product Overview

The VIA VB7009 Mini-ITX mainboard is an entry-level native x86 mainboard designed mainly for embedded and thin client applications. It can also be used for various domain applications such as desktop PC, industrial PC, etc. The mainboard is based on the VIA VX900 Unified Digital Media IGP chipset that features the VIA Chrome9™ HC with 2D/3D graphics and video accelerators for rich digital media performance.

The VIA VB7009 includes a secure and power efficient VIA C7®-D / C7® / Nano X2 NanoBGA2 processor. The VIA C7®-D / C7® / Nano X2 NanoBGA2 processor includes the VIA Padlock Security Engine, VIA StepAhead™ Technology Suite, VIA PowerSaver™, and VIA CoolStream™ technology.

The VIA VB7009 has one 1066 MHz DDR3 DIMM slot that support up to 4 GB memory size. The VIA VB7009 provides support for high fidelity audio with its included VIA VT1708S High Definition Audio codec. In addition it supports two SATA 3Gb/s storage devices.

The VIA VB7009 is compatible with a full range of Mini-ITX chassis as well as FlexATX and MicroATX enclosures and power supplies. The VIA VB7009 is fully compatible with Microsoft® and Linux operating systems.

1.1. Key Features and Benefits

1.1.1. VIA C7®-D / C7® / Nano X2 NanoBGA2 Processor

The VIA C7®-D / C7® / Nano X2 NanoBGA2 is an x86 processor packed into an ultra compact NanoBGA2 package (measuring 21mm x 21mm). It delivers an energy-efficient yet powerful performance, with cool and quiet operation that makes it ideal for embedded system applications.

The VIA C7®-D / C7® is a single core 32-bit processor based on 90 nanometer process technology, and it is the world's first Carbon Free processor.

The VIA Nano X2 is a 64-bit dual core processor that can deliver an improved multitasking ability without consuming more power. It is based on the latest 40 nanometer process technology.

1.1.2. VIA VX900 Chipset

The VIA VX900 Unified Digital Media Chipset is designed to enable high quality digital video streaming and DVD playback in a new generation of fanless, small form factor PCs and IA devices. The VIA VX900 features VIA Chrome9™ HC3 with 2D/3D graphics and video acceleration, DDR3 1066/800 support, motion compensation and dual display support to ensure a rich overall entertainment experience.

1.1.3. Modular Expansion Options

The VIA VB7009 ensures long-term usability with its support for industry standard expansion options. Its support for legacy PCI expansion cards helps to smooth and reduce the costs of transitioning to newer expansion technologies. The VIA VB7009 enables companies to slowly roll out upgrades as necessary instead of having to replace everything all at once. This ensures that companies using the VB7009 obtain the maximum benefits from its past investments in PCI expansion cards.

1.2. Product Specifications

- **Processor**
 - VIA C7®-D 1.6 GHz NanoBGA2 (for VB7009-16 SKU¹)
 - Supports 800MHz Front Side Bus
 - 21 x 21 mm FCBGA
 - VIA C7® 1.0 GHz NanoBGA2 (for VB7009-10E SKU²)
 - Supports 400MHz Front Side Bus
 - 21 x 21 mm FCBGA
 - VIA Nano X2 1.2 GHz NanoBGA2 (for VB7009-12XC SKU¹)
 - Supports 800MHz Front Side Bus
 - 21 x 21 mm FCBGA
- **Chipset**
 - VIA VX900 Unified Digital Media IGP chipset
 - 31 mm x 31 mm FCBGA
- **System Memory**
 - 1 x DIMM slot supporting DDR3 1066 MHz
 - Supports up to 4 GB memory size
- **Graphics**
 - Integrated VIA Chrome9™ HC3 3D/2D AGP graphics
 - MPEG2, WMV9/VC1, H.264 Full HD video decoder
 - DirectX 9 support
- **Onboard Peripherals**
 - **Serial ATA**
 - 2 SATA connectors
 - Supports up to 3 Gb/s
 - **Onboard LAN**
 - VIA VT6130 PCIe Gigabit Ethernet controller
 - **Onboard LVDS**
 - VIA VT1636 LVDS transmitter
 - **Onboard Audio**
 - VIA VT1708S High Definition Audio Codec
 - **Onboard Super I/O**
 - Fintek F81865F-I Super I/O controller
 - Supports up to four COM ports

● Onboard I/O Connectors

- 2 × USB 2.0 pin headers for 4 USB ports
- 2 × SATA 2.0 HDD connectors
- 1 × Front audio pin header for Line-Out and MIC-In
- 1 × Front panel pin header
- 1 × PS/2 Keyboard and Mouse pin header
- 1 × Digital I/O (GPI × 4 + GPO × 4)
- 1 × CPU fan connector
- 1 × System fan connector
- 3 × COM pin headers by F81865-I, with 5V/12V select
- 5 × COM pin headers by F81865-I, with 5V/12V select (available only for VB7009-12XC)
- 1 × PCI slot
- 1 × Dual-channel LVDS connector (18/24 bit)
- 1 × LVDS inverter pin header
- 1 × LPC pin header
- 1 × SPDIF connector
- 1 × SPI pin header
- 1 × SMBus pin header
- 1 × Temperature Sensor pin header
- 1 × Clear CMOS jumper
- 1 × COM2 voltage selector jumper
- 1 × COM3 and COM4 voltage selector jumper
- 1 × COM5 and COM6 voltage selector jumper (available only for VB7009-12XC)
- 1 × SATA DOM voltage select jumper
- 1 × LVDS panel power selector jumper (5V/3.3V)
- 1 × LVDS inverter power selector jumper (5V/12V)
- 1 × Buzzer
- 1 × ATX (20-pin) power connector

● Back Panel I/O

- 1 × VGA port
- 1 × COM port
- 1 × Parallel port
- 2 × RJ45 (GigaLAN) port
- 4 × USB 2.0 ports
- 1 × PS/2 Keyboard port
- 1 × PS/2 Mouse port
- 3 × Audio jacks: Line-In, Line-Out, MIC-In (Vertical, Smart 5.1 support)

- **BIOS**
 - Award BIOS
 - 8 Mbit SPI flash memory
- **Supported Operating System**
 - Windows 7
 - Windows Embedded Standard 7
 - Windows Embedded POSReady 7
 - Windows Embedded Standard
 - Windows XP
 - Windows CE
 - Linux
- **System Monitoring & Management**
 - Wake-on-LAN
 - Wake-on-Keyboard
 - Wake-on-Mouse
 - RTC Timer to Power On
 - AC power failure recovery
- **Operating Conditions**
 - **Operating Temperature**
 - 0°C up to 60°C
 - **Operating Humidity**
 - 0% ~ 95% (relative humidity; non-condensing)
- **Form Factor**
 - Mini-ITX
 - 17 cm x 17 cm
- **Compliance**
 - CE
 - FCC
 - RoHS

Notes:

1. The VB7009-16 and VB7009-12XC SKUs use heatsink with fan.
2. The VB7009-10E SKU uses heatsink only.

2. I/O Interface

The VIA VB7009 has a wide selection of interfaces integrated into the board. It includes a selection of frequently used ports as part of the external I/O coastline.

2.1. External I/O Ports

Figure 5: External I/O ports

2.1.1. PS/2 Port

The mainboard has two integrated PS/2 ports for keyboard and mouse. Each port is using the 6-pin Mini-DIN connector. The color purple is use for a PS/2 keyboard while the color green is use for a PS/2 mouse. The pinout of the PS/2 port are shown below.

Pin	Signal

2.1.6. USB 2.0 Port

There are four integrated USB 2.0 ports located below the two RJ45 LAN port at the external I/O panel. The USB 2.0 interface port gives complete Plug and Play and hot swap capability for external devices and it complies with USB UHCI, rev. 2.0. Each USB port is using the USB Type A receptacle connector. The pinout of the typical USB port is shown below.

2.1.7. Audio Ports

There are three audio jack receptacles integrated into a single stack on the I/O coastline. Each receptacle can fit a 3.5 mm Tip Ring Sleeve (TRS) connector to enable connections to Line-Out Line-In, and MIC-in. The Line-Out jack is for connecting to external speakers or headphones. The Line-In jack is for connecting an external audio devices such as CD player, tape player and etc.. The MIC-In jack is for connecting to a microphone.

2.2.6. CPU and System Fan Connectors

There are two fan connectors on board: one for the CPU and one for the chassis. The fan connector for the CPU is labeled as “CPUFAN1” and the fan connector for the system is labeled as “SYSFAN1”. The fans provide variable fan speeds controlled by the BIOS. The pinout of the fan connectors is shown below.

1. GND is for SATA HDD (default setting).
2. +5V is for SATA DOM. To enable the +5V on pin 7, set the SATA DOM voltage select jumper.

2.2.8. USB 2.0 Pin Headers

The mainboard has two USB 2.0 pin headers blocks that support up to four USB 2.0 ports. The pin header blocks are labeled as USB_4, and “USB_5”. The pinout of the USB pin headers are shown below.

2.2.9. COM Pin Headers

There are COM pin headers on the mainboard in addition to the COM port 1 on the external I/O. Each COM pin header supports the RS-232 standard. The COM pin headers labeled as "COM2, COM3 and COM4" are available in VB7009-16 and VB7009-10E SKUs, while the additional "COM5" and "COM6" pin headers are offered only in VB7009-12XC SKU. All of the COM pin headers can support +5V or +12V. See page 39 for details on setting the voltage. The pinout of the COM pin headers are shown below.

2.2.17. Temperature Sensor Pin Header

The mainboard supports a pin header (3-pin) that allows the connection of a temperature sensor cable for detecting the system’s internal air temperature. The temperature reading can be seen in the BIOS Setup Utility. The pin header is labeled as “J5”. The pin out of the temperature sensor pin header is shown below.

3. Jumpers

3.1. Clear CMOS Jumper

The onboard CMOS RAM stores system configuration data and has an onboard battery power supply. To reset the CMOS settings, set the jumper on pins 2 and 3 while the system is off. Return the jumper to pins 1 and 2 afterwards. Setting the jumper while the system is on will damage the mainboard. The default setting is on pins 1 and 2.

Figure 30: CLEAR CMOS jumper

Setting	Pin 1	Pin 2	Pin 3
Regular (default)	On	On	Off
Clear CMOS	Off	On	On

Table 26: CLEAR CMOS jumper settings

Note:

Except when clearing the RTC RAM, never remove the cap from the CLEAR_CMOS jumper default position. Removing the cap will cause system boot failure. Avoid clearing the CMOS while the system is on; it will damage the mainboard.

3.2. COM Voltage Select Jumpers

Each of the additional COM ports (available through the onboard COM pin headers, see page 27) can support both +5V and +12V. COM2 has its own pin header block. COM3 and COM4 share a single pin header block. COM5 and COM6 also share a single pin header block.

3.2.1. COM2 Voltage Select Jumper

The voltage for COM2 is controlled by the jumper labeled as “J12”. The voltage can be either +5V or +12V. +5V is the default setting. The jumper settings are shown below.

Figure 31: COM2 voltage select jumper

Setting	Pin 1	Pin 2	Pin 3
+5V (default)	On	On	Off
+12V	Off	On	On

Table 27: COM2 voltage select jumper settings

3.2.2. COM3 and COM4 Voltage Select Jumper

The voltage for COM3 and COM4 is controlled by the jumper labeled as "J13". Refer to Figure 32 for the location of the jumper.

The voltage can be either +5V or +12V. +5V is the default setting. The even pin numbers correspond to COM3. The odd pin numbers correspond to COM4. The jumper settings are shown below.

Figure 32: Voltage select jumpers for COM3 and COM4

COM4 Setting	Pin 1	Pin 3	Pin 5
+5V (default)	On	On	Off
+12V	Off	On	On

+12V	Off	On	On

Table 28: Jumper settings for COM3 and COM4

3.2.3. COM5 and COM6 Voltage Select Jumper

The voltage for COM5 and COM6 is controlled by the jumper labeled as "J14". Refer to Figure 33 for the location of the jumper.

The voltage can be either +5V or +12V. +5V is the default setting. The even pin numbers correspond to COM5. The odd pin numbers correspond to COM6. The jumper settings are shown below.

Figure 33: Voltage select jumpers for COM5 and COM6

COM6 Setting	Pin 1	Pin 3	Pin 5
+5V (default)	On	On	Off
+12V	Off	On	On
COM5 Setting	Pin 2	Pin 4	Pin 6

+12V	Off	On	On

Table 29: Jumper settings for COM5 and COM6

Note:

If the mainboard is not equipped with COM5 and COM6, then the J14 jumper will not be on the mainboard either.

3.3. SATA DOM Voltage Select Jumper

The SATA connectors (see page 25) can be used to support Disk-on-Module (DOM) flash drives. When the jumpers are set, +5V will be delivered to the 7th pin of the SATA connectors. The pin jumper is labeled as “J2”. The jumper settings are shown below.

Figure 34: SATA DOM voltage select jumper

SATA1 Setting	Pin 1	Pin 3	Pin 5
DOM support	On	On	Off

3.4. Panel Power Select Jumper

The mainboard has a jumper that controls the voltage delivered to the LVDS panel connector. The jumper is labeled as “PVDD1”. The jumper settings are shown below.

Figure 35: LVDS power select jumper

Panel Voltage	Pin 1	Pin 2	Pin 3
+5V	On	On	Off

4. Expansion Slots

4.1. DDR3 Memory Slots

The mainboard provide one DDR3 DIMM memory slot. The memory slot can accommodate up to 4 GB of 1066 MHz memory. The memory slot is labeled as "DIMM1". The location of the DDR3 memory slot is shown below.

Figure 37: DDR3 memory slots

4.1.1. Installing a Memory Module

Step 1

Disengage the locking mechanism at both ends of the DIMM slot by pressing the retaining clips outward.

Figure 38: Unlocking the memory DIMM slot

Step 2

Align the notch on the DIMM memory module with the counter part on the DIMM slot.

Figure 39: Inserting the memory module

Step 3

Insert the DIMM memory module into the slot and push down at both ends until the locking clips lock the DIMM memory module into place.

Figure 40: Locking the memory module

4.1.2. Removing a Memory Module

Step 1

To disengage the locking clips, push outward the locking clips on both ends of memory slot. When the locking clips have cleared, the DIMM memory module will automatically pop up. Remove the memory module.

Figure 41: Removing the memory module

4.1.3. PCI Slot

The onboard PCI slot, labeled as “PCI_SLOT1”, supports 5V 32-bit PCI cards. It is not compatible with PCI cards requiring 3.3V signaling. The location of the PCI slot is shown below.

Figure 42: PCI slot

Note:

1. The orientation of PCI card can be changed from vertical to horizontal using a riser card module.
2. When adding or removing expansion card, unplug first the power supply.

5. Hardware Installation

5.1. Installing into a Chassis

The VB7009 can be fitted into any chassis that has the mounting holes for compatible with the standard Mini-ITX mounting hole locations. Additionally, the chassis must meet the minimum height requirements for specified areas of the mainboard. If a riser card module is being used, the chassis will need to accommodate the additional space requirements.

5.1.1. Suggested minimum chassis dimensions

The figure below shows the suggested minimum space requirements that a chassis should have in order to work well with the VB7009.

Figure 43: Suggested minimum chassis dimensions

Each side of the mainboard should have a buffer zone from the internal wall of the chassis. The side of the mainboard that accommodates the I/O coastline should have a buffer of 1.00 mm. The side on the opposite end of the I/O

coastline should have a buffer of at least 5.00 mm. The two sides adjacent to the I/O coastline should have at least a 10.00 mm buffer.

For the side that is close to the PCI slot, the buffer should be at least 100.00 mm if a riser card module will be used.

5.1.2. Suggested minimum chassis height

The figure below shows the suggested minimum height requirements for the internal space of the chassis. It is not necessary for the internal ceiling to be evenly flat. What is required is that the internal ceiling height must be strictly observed for each section that is highlighted. The highest part of the ceiling will be above the PCI slot.

Figure 44: Suggested minimum internal chassis ceiling height

5.1.3. Suggested keepout areas

The figure below shows the areas of the mainboard that is highly suggested to leave unobstructed.

Figure 45: Suggested keepout areas

6. BIOS Setup Utility

6.1. Entering the BIOS Setup Utility

Power on the computer and press **Delete** during the beginning of the boot sequence to enter the BIOS Setup Utility. If the entry point has passed, restart the system and try again.

6.2. Control Keys

Up	Move up one row
Down	Move down one row
Left	Move to the left in the navigation bar
Right	Move to the right in the navigation bar

Note:

1. Must be pressed using the 10-key pad.
2. The General help contents are only for the Status Page and Option Page setup menus.

6.3. Navigating the BIOS Menus

The main menu displays all the BIOS setup categories. Use the <Left>/<Right> and <Up>/<Down> arrow keys to select any item or sub-menu. Descriptions of the selected/highlighted category are displayed at the bottom of the screen.

The small triangular arrowhead symbol next to a field indicates that a sub-menu is available (see figure below). Press <Enter> to display the sub-menu. To exit the sub-menu, press <Esc>.

6.4. Getting Help

The BIOS Setup Utility provides a “**General Help**” screen. This screen can be accessed at any time by pressing **F1**. The help screen displays the keys for using and navigating the BIOS Setup Utility. Press **Esc** to exit the help screen.

6.5. Main Menu

The Main Menu contains thirteen setup functions and two exit choices. Use arrow keys to select the items and press **<Enter>** to accept or enter Sub-menu.

The specifications of your drive must match with the drive table. The hard disk will not work properly if you enter incorrect information in this category. Select **"Auto"** whenever possible. If you select **"Manual"**, make sure the information is from your hard disk vendor or system manufacturer.

Below is a table that details required hard drive information when using the **"Manual"** mode.

Settings	Description

Cylinder	Number of cylinders
Head	Number of heads
Precomp	Write precompensation
Landing Zone	Cylinder location of the landing zone
Sector	Number of sectors

6.8. Advanced BIOS Features

The Advanced BIOS Features section includes the following submenus:

- ☐ CPU Feature
- ☐ Hard Disk Boot Priority

6.8.1. Quick Power On Self-Test

Shortens Power On Self-Test (POST) cycle to enable shorter boot up time.

Settings	Description
Disabled	Standard Power On Self Test (POST)
Enabled	Shorten Power On Self Test (POST) cycle and boot up time

6.8.2. First/Second/Third Boot Device

Set the boot device sequence as BIOS attempts to load the disk operating system.

Settings	Description
Removable	Boot from external drive
Hard Disk	Boot from the HDD
CDROM	Boot from CDROM
Legacy LAN	Boot from network drive

VIA Networking	Boot from network drive
Disabled	Disable the boot device sequence

6.8.3. Boot Other Device

Enables the system to boot from alternate devices if the system fails to boot from the “First/Second/Third Boot Device” lists.

Settings	Description
Disabled	No alternate boot device allowed
Enabled	Enable alternate boot device

6.8.4. Boot Up NumLock Status

Set the NumLock status when the system is powered on.

Settings	Description
Off	Forces keypad to behave as arrow keys
On	Forces keypad to behave as 10-key

6.8.5. Security Option

Selects whether the password is required every time the System boots, or only when you enter Setup.

Settings	Description
Setup	Password prompt appears only when end users try to run BIOS Setup
System	Password prompt appears every time when the computer is powered on and when end users try to run BIOS Setup

6.8.6. Full Screen Logo Show

Show full screen logo during BIOS boot up process.

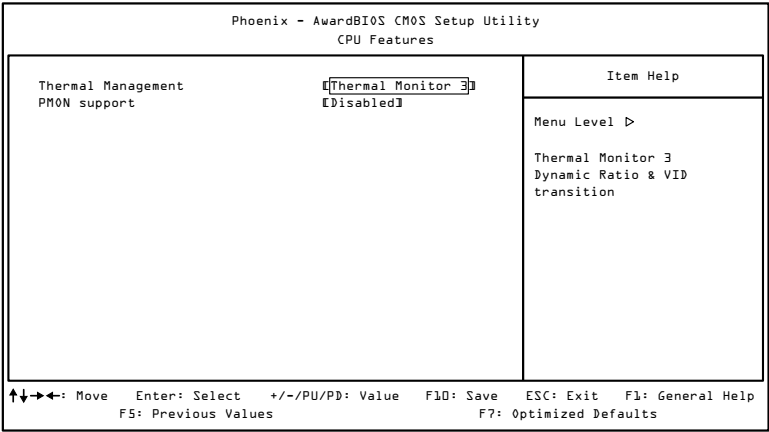

Settings: [Disabled, Enabled]

6.8.7. Summary Screen Show

Show summary screen.

Settings: [Disabled, Enabled]

6.9. CPU Feature

6.9.1. Thermal Management

This item sets CPU's thermal control rule to protect CPU from overheating.

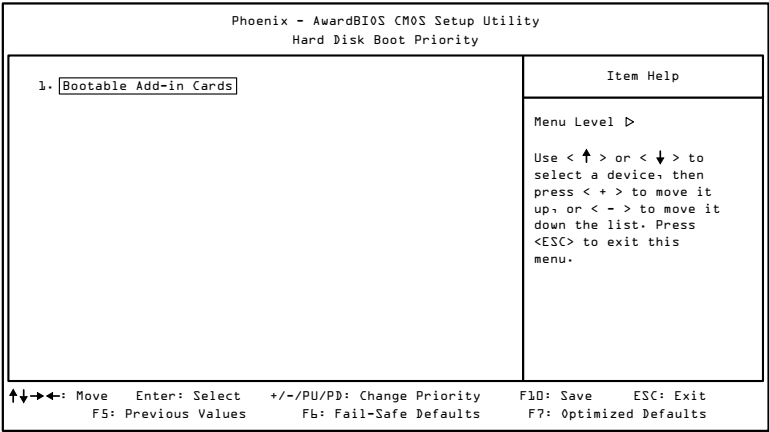

Settings	Description
Thermal Monitor 3	Dynamic Ratio & VID Transition
Disabled	Disable this feature

6.9.2. PMON support

This feature controlled the CPU speed to perform automatically at best performance to comply with the given system applications.

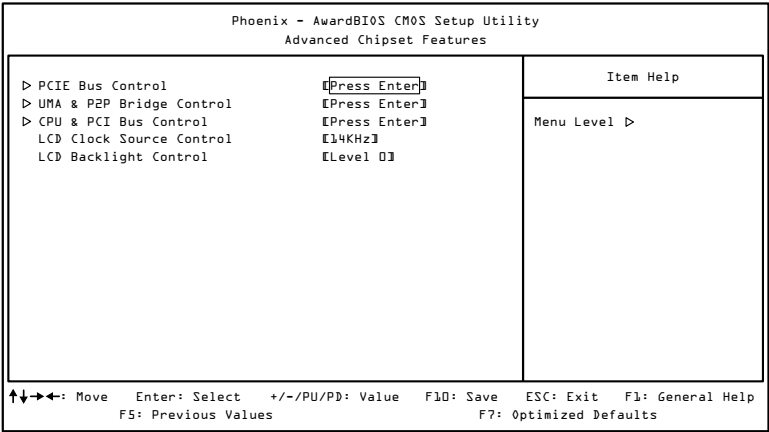

Settings	Description
Disabled	Turn off this feature.
Auto	Automatically control the CPU speed to perform at best performance.

6.10. Hard Disk Boot Priority

This is for setting the priority of the hard disk boot order when the “Hard Disk” option is selected in the “[First/Second/Third] Boot Device” menu item.

6.11. Advanced Chipset Features

Caution:

The Advanced Chipset Features menu is used for optimizing the chipset functions. Do not change these settings unless you are familiar with the chipset.

The Advanced Chipset Features section includes the following submenus:

- ☐ PCIE Bus Control
- ☐ UMA & P2P Bridge Control
- ☐ CPU & PCI Bus Control

6.11.1. LCD Clock Source Control

Settings: [14 KHz, 7 KHz, 110 Hz, 55 Hz]

6.18. SuperIO Device

6.18.1. Onboard Serial Ports 1 ~ 4

Set the base I/O port address and IRQ for the onboard serial ports. Selecting "Auto" allows the BIOS to automatically determine the correct base I/O port.

Port	Address	IRQ
1	Disabled, 3F8, 2F8, 3E8, 2E8, 338, 348, Auto	4
2	Disabled, 3F8, 2F8, 3E8, 2E8, 338, 348, Auto	4
3	Disabled, 3F8, 2F8, 3E8, 2E8, 338, 348, Auto	4
4	Disabled, 3F8, 2F8, 3E8, 2E8, 338, 348, Auto	4

6.18.2. Onboard Parallel Port

This specifies the I/O port address and IRQ of the onboard parallel port.
Settings: [Disabled, 378/IRQ7, 278/IRQ5, 3BC/IRQ7]

6.18.3. Parallel Port Mode

Set the parallel port mode. To operate the onboard parallel port as Standard Parallel Port, choose SPP. To operate the onboard parallel port in the EPP mode, choose EPP. By choosing ECP, the onboard parallel port will operate in

ECP mode. Choosing ECP + EPP will allow the onboard parallel port to support both the ECP and EPP modes simultaneously.

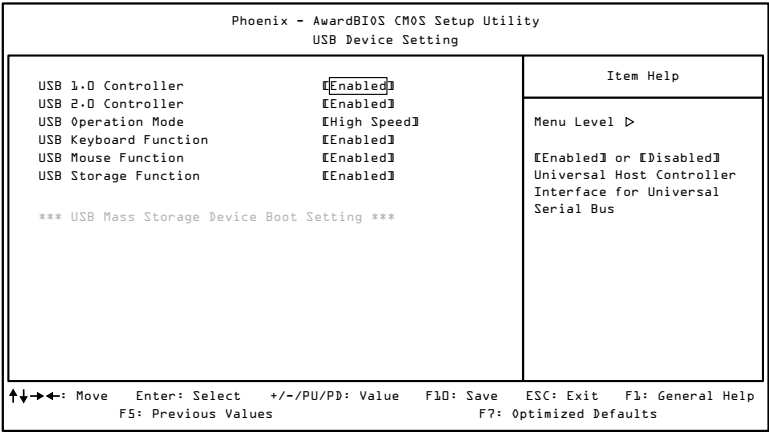

Settings: [SPP, EPP, ECP, ECP + EPP]

6.18.4. ECP Mode Use DMA

ECP (Extended Capabilities Port) has two DMA channels that it can use. The default channel is 3. However, some expansion cards may use channel 3 as well. To solve this conflict, change the ECP channel to 1. Select a DMA channel for the port.

Settings: [1, 3]

6.19. USB Device Setting

6.19.1. USB 1.0 Controller

Enable or disable Universal Host Controller Interface for Universal Serial Bus.

Settings: [Disabled, Enabled]

6.19.2. USB 2.0 Controller

Enable or disable Enhanced Host Controller Interface for Universal Serial Bus.

Settings: [Disabled, Enabled]

6.19.3. USB Operation Mode

Auto decide USB device operation mode.

Settings	Description
Full/Low Speed	All of USB Device operated on full/low speed mode
High Speed	If USB device was high speed device, then it operated on high speed mode.

6.19.4. USB Keyboard Function

Enable or disable legacy support of USB keyboard.

Settings: [Disabled, Enabled]

6.19.5. USB Mouse Function

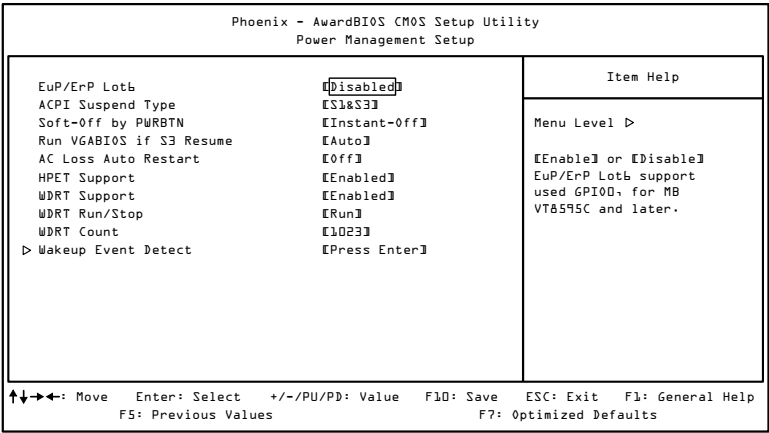

Settings: [Disabled, Enabled]

6.19.6. USB Storage Function

Enable or disable legacy support of USB mass storage.

Settings: [Disabled, Enabled]

6.20. Power Management Setup

The Power Management Setup section includes the following submenus:

- Wakeup Event Detect

6.20.1. EuP/ErP Lot6

This feature determines whether to let the system consume less power ACPI S3/S4/S5 state.

Settings: [Disabled, Enabled]

Note:

When EuP/ErP Lot6 support is enabled, the Wake on LAN from system OS ACPI S3/S4/S5 state will be disabled.

6.20.2. ACPI Suspend Type

Settings	Description
S1(POS)	S1/Power On Suspend (POS) is a low power state. In this state, no system context (CPU or chipset) is lost and hardware maintains all system contexts.
S3(STR)	S3/Suspend To RAM (STR) is a power-down state. In this state, power is supplied only to essential components such as main memory and

	wakeup-capable devices. The system context is saved to main memory, and context is restored from the memory when a "wakeup" event occurs.
S1 & S3	Depends on the OS to select S1 or S3.

6.20.3. Soft-Off by PWRBTN

Settings	Description
Delay 4 Sec	System is turned off if power button is pressed for more than four seconds.
Instant-Off	Power button functions as a normal power-on/-off button.

6.20.4. Run VGABIOS if S3 Resume

Select whether to run VGA BIOS if resuming from S3 state. This is only necessary for older VGA drivers.

Settings: [Auto, Yes, No]

6.20.5. AC Loss Auto Restart

The field defines how the system will respond after an AC power loss during system operation.

Settings	Description
Off	Keeps the system in an off state until the power button is pressed
On	Restarts the system when the power is back
Former-Sts	Former-Sts

6.20.6. HPET Support

Settings: [Disabled, Enabled]

6.20.7. WDRT Support

Settings: [Disabled, Enabled]

6.20.8. WDRT Run/Stop

Load Optimized Defaults	

This option is for restoring all the default optimized BIOS settings. The default optimized values are set by the mainboard manufacturer to provide a stable system with optimized performance.

Entering "Y" and press <Enter> to load the default optimized BIOS values.

Entering "N" will cancel the load optimized defaults request.

6.26 Set Supervisor/User Password

Phoenix - AwardBIOS CMOS Setup Utility

Change/Set/Disable Password	

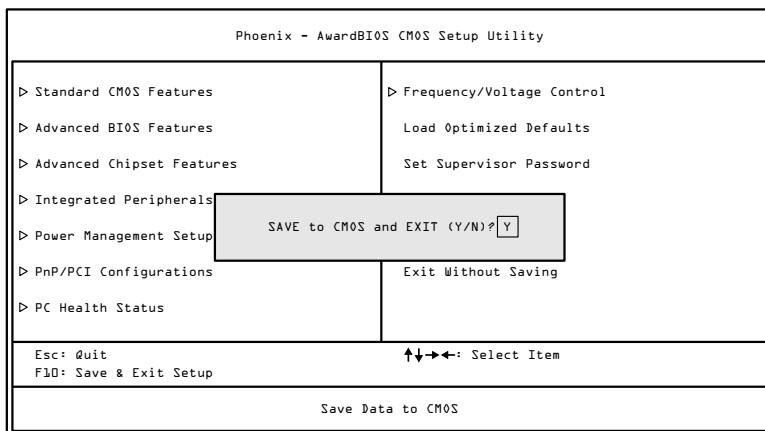

This option is for setting a password for entering BIOS Setup. When a password has been set, a password prompt will be displayed whenever BIOS Setup is run. This prevents an unauthorized person from changing any part of your system configuration.

There are two types of passwords you can set. A supervisor password and a user password. When a supervisor password is used, the BIOS Setup program can be accessed and the BIOS settings can be changed. When a user password is used, the BIOS Setup program can be accessed but the BIOS settings cannot be changed.

To set the password, type the password (up to eight characters in length) and press **<Enter>**. The password typed now will clear any previously set password from CMOS memory. The new password will need to be reentered to be confirmed. To cancel the process press **<Esc>**.

To disable the password, press **<Enter>** when prompted to enter a new password. A message will show up to confirm disabling the password. To cancel the process press **<Esc>**.

Additionally, when a password is enabled, the BIOS can be set to request the password each time the system is booted. This would prevent unauthorized use of the system. See "Security Option" in the "Advanced BIOS Features" section for more details.

Entering "N" will cancel the exit request.

6.28 Exit Without Saving

Phoenix - AwardBIOS CMOS Setup Utility

Entering “Y” discards any changes made and exits the program.

Entering “N” will cancel the exit request

7 Driver Installation

7.1 Microsoft Driver Support

The VIA VB7009 mainboard is compatible with Microsoft operating systems. The latest Windows drivers can be downloaded from the VEPD website at www.viaembedded.com.

For embedded operating systems, the related drivers can be found in the VIA Embedded website at www.viaembedded.com.

7.2 Linux Driver Support

The VIA VB7009 mainboard is highly compatible with many Linux distributions.

Support and drivers are provided through various methods including:

- Drivers provided by VIA
- Using a driver built into a distribution package
- Visiting www.viaembedded.com for the latest updated drivers
- Installing a third party driver (such as the ALSA driver from the Advanced Linux Sound Architecture project for integrated audio)

For OEM clients and system integrators developing a product for long term production, other code and resources may also be made available. Contact VEPD to submit a request.
